

MyHomeUSB CRM — Business Flow & Approval Ladder

Every workflow from lead to handover, with every approval step.

1. The Big Picture

2. Lead → Project (Pre-execution Phase)

Step 1 — Lead capture

- **Public website form** → POST `/api/public/lead` → `db.leads` (status: `new`).

Step 2 — Pre-Sales contact

- **Pre-Sales** user: opens lead, logs first contact, qualifies.
- API: `PATCH /api/crm/leads/{id}` → status `qualified`.
- Marketing Head's distribution rules auto-assign Pre-Sales user (round-robin / weighted / solo-mode).

Step 3 — Sales quote

- **Sales** user: creates quote, negotiates.
- Status: `quoted` → `negotiation` → `won` / `lost`.
- On `won`: trigger `POST /api/crm/leads/{id}/convert` → creates `projects` record with status `draft`.

Step 4 — CRE setup

- **CRE** opens project, sets `client_name`, contract value, `payment_stages` ladder.
- API: `POST /api/projects/{id}/payment-stages`.
- Status: `draft` → `pending_payment` after CRE submits.

Step 5 — Accountant verifies first cheque

- **CRE** collects 1st cheque → `POST /api/cre/cheques` (attached photo, amount).
- **Accountant** opens Approvals > Income → reviews → Accept.
- API: `POST /api/accountant/income/{cheque_id}/accept` → cashbook IN entry + status `payment_verified`.

Step 6 — Planning review

- **CRE** clicks "Submit to Planning" → status `planning_review`.
- **Planning** edits WOs, scope, stages.
- Submits for approval → status `awaiting_approval`.

Step 7 — GM + Super Admin sign-off

- **GM** approves → status `gm_approved`.
- **Super Admin** approves → status `planning_approved`.
- Project becomes **ACTIVE**.

3. RAB (Labour Payment Request) — 5-step Approval Ladder

State transitions in `payment\_request.status`

- `requested` → `pm_approved` → `qc_approved` → `planning_approved` → `approved` (Accountant release)
- Any step can reject: `pm_rejected`, `qc_rejected`, `planning_rejected`, `accountant_rejected`
- SE can edit while in `requested` OR any `*_rejected`.

Single vs Multi-Stage Bill

- Single stage: `payment_request.amount` = stage amount.
- Multi-stage: `is_multi_stage` = `True`, `stage_breakdown` = `[{stage_id, request_id, amount}, ...]`.
- Multi-stage bills are linked by `rab_group_id`.
- **Accountant Release for multi-stage:** ONE click releases the whole group atomically — all siblings marked approved, ONE cashbook entry (description = "Contractor - Stage1 + Stage2", `linked_request_ids[]`).

RAB Numbering

- Per contractor, monotonic across regular + additional stages.
- Example: Total RAB's gives RAB-01, RAB-02; next Additional RAB starts at RAB-03.

4. Additional Work Flow

Section Lock/Unlock — Planning

- Section is the parent gate; items are children.
- Section LOCKED → all items locked → section's auto-stage closed → SE can't bill.
- Section UNLOCKED → all items default to unlocked → section's auto-stage opens → SE can bill.
- Planning can re-lock individual items to exclude them from billing.

Section ↔ Stage mapping

- Each section maps to ONE auto-stage in `wo.stages` with `linked_section_id` set.
- Stage `name` = section name (e.g., "anbu Demo Section").
- Stage `amount` = sum of UNLOCKED items in that section.
- Stage `is_open` mirrors `not section.is_locked`.

4 Sub-tabs (Feb 2026)

Tab	claim_type	Behaviour
Claimable From Client	`claimable`	Bills client; appears in Client Portal cashflow
Non-Claimable From Client	`non_claimable`	Company absorbs; hidden from Client Portal
Rework (Site Engineer)	`rework_se` (+ legacy `rework`)	Deducted from contractor's payment, NOT billed
Rework (Client)	`rework_client`	Billed to client AND paid to contractor

SE Item-Picking (Request RAB)

- Section header checkbox → auto-picks every unlocked item.
- Per-item Pick checkbox → fine-tune which items are billed.
- Allocation amount = sum of picked items' totals.

5. Material Request Flow

6. Petty Cash Flow

7. Income (Cheque) Flow

Cheque Management Tabs (Accountant)

Tab	Meaning
All	Every cheque

Tab	Meaning
Received	Just collected by CRE, awaiting verify
Opened	Accountant has opened the envelope
Awaiting CRE	Sent back to CRE for clarification
Issued	Used to pay a vendor / contractor
Bounced	Returned by bank
Disabled	Voided

8. Stage Closure / Project Advancement

9. Cross-Cutting Money Flows

Suspense Ledger

- Created when: a cheque pays more than the bill amount (excess credited to contractor).
- Applied on: next payment to the same contractor (Accountant ticks "Use suspense balance" in release dialog).
- Tracked in: `db.contractor_suspense_ledger`.

Cashbook (Single Source of Truth)

- Every IN (income) and OUT (release/issue) flows here.
- Linked back via: `request_id`, `linked_request_ids[]` (multi-stage), `cheque_id`, `project_id`.
- Reversible by Super Admin only.

Client Portal Cashflow Filter

- Income visible to client: all CRE-collected cheques.
- Outflow visible to client: Claimable + Rework-Client.
- Hidden: Non-Claimable + Rework-SE (internal).

10. Notifications Triggers

Event	Notifies
New lead	Pre-Sales (per distribution rule)
Lead converted	CRE

Event	Notifies
Cheque received	Accountant
RAB raised	PM
RAB PM-approved	QC
RAB QC-approved	Planning
RAB Planning-approved	Accountant
RAB rejected (any step)	SE (originator)
Payment released	SE + PM + Cashbook viewers
Stage marked complete	PM
Project advanced	All team members + CRE + Client
Cheque bounced	Accountant + CRE + Super Admin

End of business flow doc.
